

MSCI World - calendar month total returns (52yrs)

Source: Bloomberg Finance L.P., Momentum Global Investment Management, data to 30 April 2026.

Not normal, but welcome

Alex Harvey, CFA
Senior Portfolio Manager & Investment Strategist

What does the chart show?

The chart shows the frequency of global equity calendar month returns for the past 52 years (since my birth in May 1974). The highest frequency monthly return is a positive 2-3% which has occurred 76 times and is represented above as the green bar. The red bar shows the return in April 2026 which was 9.6% and ranks 11th in the league of calendar month returns since my inception, sitting in the 98th percentile of monthly returns. In other words, April was a very strong month.

We also see the 'skew' in the chart showing that equity returns are not 'normally' distributed. Kurtosis is the technical term for the 'tailedness' of a return distribution. The global equity returns above are leptokurtic, meaning they exhibit a fatter (left) tail than a standard, or normal, distribution and a higher, if infrequent, probability of large negative calendar month returns.

Why is it important?

The chart serves as a reminder that markets can turn sharply, especially when the Commander in Chief himself changes his strategy almost daily. Timing the markets is notoriously difficult and for most investors a buy and hold approach is best. Had you missed out on April's near 10% return - and the 10 best months ahead of it from the last 52 years - then your total return since my inception (4,000%) would be less than one third of your return from leaving it alone (12,700%). Even though the cumulative missed returns amount to only around 120 percentage points, the compounding effect results in an opportunity cost measured in thousands of percentage points (the highest calendar month return over the period occurred in January 1975 when global equities returned 14.6%).

The chart also demonstrates how periodicity is important. The reason April looked so good, was that the market bottomed on 30th March, having previously peaked near the end of February. It is only really by luck (call it Presidential fortune) that this return profile is observed, with the market turning in line with the fall of the calendar month ends. Rolling 30d returns would look very different.

The leptokurtic left tail events are a reminder that extreme negative returns can and do occur. This is what pulls the average month return (0.9%) below the most frequently observed return (+2-3%). The worst calendar month for global equities observed during my lifetime was during 'peak GFC*' in October 2008 when global equities fell 19%, eclipsing October 1987's 17% loss following the 'Black Monday' crash.

*GFC refers to the Global Financial Crisis.

The defining global macro theme was the inflationary energy shock caused by geopolitical tensions, which delayed expected monetary easing across many major economies.

US

- » Investors sharply reduced expectations for Federal Reserve rate cuts as inflation concerns intensified, especially due to higher oil prices and tariff uncertainty.
- » President Donald Trump renewed public pressure on the Fed to lower interest rates, increasing focus on central bank independence.
- » Oil prices moved above \$100/barrel amid the Iran conflict and Strait of Hormuz disruption fears, pushing Treasury yields higher and weighing on global risk sentiment.
- » US trade policy remained volatile as courts challenged parts of the administration's global tariff programme while Washington warned the EU over future tariff escalation.

UK

- » Prime Minister Keir Starmer faced major political pressure after Labour suffered heavy local election losses across Britain.
- » Bond investors closely monitored UK elections amid concerns political fragmentation could undermine fiscal credibility and destabilise gilt markets.
- » Reform UK's electoral gains reshaped the political landscape and intensified debate around future coalition or tactical arrangements on the British right.
- » The FTSE 100 recorded another weekly decline as investors weighed Middle East risks, energy prices, and UK political instability.

Europe

- » European Central Bank officials signalled that a June rate hike was increasingly possible if inflation pressures continued to worsen.
- » ECB policymakers warned that elevated energy prices linked to the Iran conflict could keep inflation higher for longer across the eurozone.
- » European regulators pushed for stronger centralised financial supervision and tighter oversight of bank capital requirements.
- » EU competitiveness and sustainability policy came under renewed debate amid concerns Europe was losing ground relative to the US and China.

Rest of the World/Asia

- » China's export performance improved significantly in April despite ongoing trade tensions with the United States.
- » Beijing continued balancing economic stimulus with financial stability concerns as authorities attempted to support weak domestic demand and the property sector.
- » Japanese policymakers remained under pressure from yen weakness and rising imported energy costs as oil prices surged globally.
- » Global markets were dominated by Middle East geopolitical tensions, especially fears over disruption to oil shipments through the Strait of Hormuz.

This document is not intended for use or distribution by any person in any jurisdiction in which it is not authorised or permitted, or to anyone who would be an unlawful recipient. The original recipient is solely responsible for any actions in further distributing this document, and in doing so should be satisfied that there is no breach of local legislation or regulation. This document should not be reproduced or distributed except via original recipients acting as professional intermediaries. This document is not for distribution in the United States.

Prospective investors should take appropriate advice regarding applicable legal, taxation and exchange control regulations in countries of their citizenship, residence or domicile which may be relevant to the acquisition, holding, transfer, redemption or disposal of any investments herein solicited.

Any opinions expressed herein are those at the date this document is issued. Data, models and other statistics are sourced from our own records, unless otherwise stated. We believe that the information contained is from reliable sources, but we do not guarantee the relevance, accuracy or completeness thereof. Unless otherwise provided under UK law, MGIM does not accept liability for irrelevant, inaccurate or incomplete information contained, or for the correctness of opinions expressed.

The value of investments in discretionary accounts, and the income derived, may fluctuate and it is possible that an investor may incur losses, including a loss of the principal invested. Past performance is not generally indicative of future performance. Investors whose reference currency differs from that in which the underlying assets are invested may be subject to exchange rate movements that alter the value of their investments.

Under our multi-management arrangements, we selectively appoint underlying sub-investment managers and funds to actively manage underlying asset holdings in the pursuit of achieving mandated performance objectives. Annual investment management fees are payable both to the multi-manager and the manager of the underlying assets at rates contained in the offering documents of the relevant portfolios (and may involve performance fees where expressly indicated therein).

MGIM (Company Registration No. 3733094) has its registered office at 3 More London Riverside, London, SE1 2AQ. MGIM is authorised and regulated by the Financial Conduct Authority in the United Kingdom (registration no.232357), and is exempt from the requirements of section 7(1) of the Financial Advisory and Intermediary Services Act 37 of 2002 (FAIS) in South Africa, in terms of the FSCA FAIS Notice 9 of 2025 (published 9 January 2025).
