# Key Investment Themes For Extraordinary Uncertainty and Continued Elevated Volatility

The effects from this unprecedented economic shock will impact risk assets for an extended period; important to be flexible in approach and seek opportunities to benefit from volatility

For illustrative and discussion purposes only. This material is general in nature and is not directed to any category of investors and should not be regarded as individualized, a recommendation, investment advice or a suggestion to engage in or refrain from any investment-related course of action. Investing entails risks, including possible loss of principal. See Additional Disclosures at the end of this piece, which are an important part of this presentation.

## Theme 1: Durable Income & Yield

The rapid recovery in risk premiums and ultra-low rates create a challenging setup: sector and issuer selection is critical

### Spreads have Partly Recovered the 1Q20 Widening<sup>1</sup>

- Partial recovery post-credit shock driven by COVID-19 impact and drop in oil after OPEC failed to restrain production; spreads remain elevated
- Fed, ECB and BoE intervention effective in driving down bid-ask spreads in these markets
- While the beginning and bottom of the exogenous shock has been relatively quick (10–14 weeks), the ending is likely to be long-tailed

### Developed Market Interest Rates Have Returned to Meager Levels<sup>1</sup>

- Fiscal and monetary policy response from major central banks more aggressive at the outset than the GFC, with \$19T<sup>2</sup> in aggregate stimulus
- Actions geared towards reducing market risk, not idiosyncratic risk, and easing financial conditions to promote consumption and investment
- Active management critical to identifying opportunities, and minimizing potential for permanent capital loss as investors move out the risk curve

1. Bloomberg, as of 7/10/2020.

2. Bloomberg, Neuberger Berman. ECB and BoJ Balance Sheet converted to USD by average start/end FX on a weekly basis. Tickers: FARFAST, EBBSTOTAL, BJAOTL. As of 6/24/2020. Historical trends do not imply, forecast or guarantee future results. Information is as of the date indicated and subject to change without notice. Nothing herein constitutes a prediction or projection of future events or future market behavior. For illustrative and discussion purposes only. Nothing herein constitutes investment, legal, accounting or tax advice, or a recommendation to buy, sell or hold a security. This material is not intended as a formal research report and should not be relied upon as a basis for making an investment decision. Investing entails risks, including possible loss of principal. Past performance is no guarantee of future results. Due to a variety of factors, actual events or market behavior may differ significantly from any views expressed.

## Theme 2: Regime Shift in Equities: Strategies With Potential to Outperform

With lack of earnings visibility, focus on quality, income and monetizing volatility. Also consider structural thematic investing

As of 06/30/2020.

1. Bloomberg. Weighted average book yield spread between quality portfolio and Russell 1000 Index. Quality portfolio defined as highest quintile ROA and lowest quintile Debt/EBITDA stocks within each sector equally weighted from Russell 1000 Index, rebalanced at end of each month.
2. Bloomberg. Weighted average book yield spread between an income portfolio and Russell 1000 Index. Income portfolio defined as highest quintile dividend + buyback yield stocks within each sector equally weighted from Russell 1000 Index, rebalanced at end of each month.
3. Bloomberg.
4. Neuberger Berman, Ericsson, Qualcomm.

### Quality

- Strongest performing factor in a “U-shaped” recovery
- Investors tend to reward robust company fundamentals during challenging economic environments with high uncertainty, particularly in large cap
- “V-shaped” recovery should see stabilization in more dislocated mid- and small cap companies

### Income

- Income equity factors have done well in “U-shaped and “V-shaped” recovery environments – favor companies that can maintain dividends
- Don’t forget to look to the value factor in a “V-shaped” recovery. We believe value remains exceedingly cheap historically and should provide excellent risk/reward profile as the economy recovers

### Volatility Monetization

- With the VIX at elevated levels (20–40%), cash secured index-based put writing offers a high level of premium compensation
- Current 1-month S&P 500 put writing offers high monthly premium
- Attractive return profile with upside participation and downside mitigation

### Thematic: 5G Connectivity

- 5G deployment and proliferation are in early stages with nations and enterprises making strategic investments
- COVID-19 is accelerating structural shifts in remote work, education and telemedicine

For Professional Clients only

## Theme 3: Dislocation Play Through Private Equity and Private Credit

Access to new capital via private markets will likely play a central role in supporting companies affected by the COVID crisis

### A Timely Opportunity For Private Markets Investing

Global Private Equity Median IRR by Vintage Year<sup>1</sup>

- Funds raised during downturns have historically been some of the strongest vintages, benefitting from depressed purchase valuations and a wealth of opportunities
- Private Equity and Private Credit can provide long term, flexible capital to help companies endure the current crisis and pursue long term value creation

1. Source: Cambridge Index Global PE Index IRR Statistics as of December 31, 2019, which is the most recent available. This data was provided to Neuberger Berman by Cambridge Associates at no charge. Past performance is not an indicator, guarantee or projection of future performance.

## Theme 4: Idiosyncratic Ideas

Opportunities for diversification. Strategies that aim to deliver returns uncorrelated to overall market directionality

### Diversifying Strategies can Potentially Improve Portfolio Risk/Return<sup>1</sup>

### Seek Strategies that have Unique and Asymmetric Payoffs

**Uncorrelated Strategies:** Strategies less reliant on traditional market betas and macroeconomic drivers

**Unconstrained Active Management:** Market neutral equity, global macro, short-term trading

**Long/Short Active Management:** Strategies that can exploit both sides of the market

**Volatility Monetization:** With volatility likely to remain high, turn a perceived negative into a potential positive

**Deep Contrarian:** Suitably sized positions in assets with high potential for asymmetric return

### Uncorrelated Strategies may Cushion Traditional Asset Downturns<sup>2</sup>

1. Neuberger Berman, Hedge Fund Research, Bloomberg. The performance data for the indices is shown for illustrative purposes only.

2. Data is from June 2009 through February 29, 2020. S&P 500 Index, ICE BofA US High Yield Index, MSCI ACWI ex - US Index, HFRI Equity Market Neutral Index, HFRX Macro: Systematic Diversified CTA Index, Bloomberg Barclays US Aggregate Bond Index, The Barclay CTA Index.

# Strategic Case for Commodities

The ever-increasing debt load in a regime of secular reduction in growth paves the way for inflation down the road

### A Timely Opportunity for Commodities

- Commodity recovery can continue irrespective of the path equity markets take: commodities are spot assets priced based on current inventory and demand levels, unlike stocks and bonds which are priced based on future expectations
- Inventory: voluntary and involuntary production cuts across commodity markets are leading inventories to trend down
- Demand: ample global liquidity across commodity markets is supporting demand through increased fixed asset investment and/or improved consumption
- With real rates negative and/or grinding lower, USD is losing purchasing power against other currencies. We believe commodities can serve as a short USD hedge while being strongly tied to the synchronized recovery in global growth

Source: Neuberger Berman, Bloomberg. Nothing herein constitutes a prediction or projection of future events or future market behavior. Due to a variety of factors, actual events or market behavior may differ significantly from any views expressed. Past performance is not indicative of future results.

## Expect Volatility to Continue

Long-term recoveries tend to have ups and downs roughly every three months

- This time, swings could be larger and more frequent, given the nature of uncertainties and concentration of market leadership in a few mega-cap stocks
- Benefit from volatility to implement portfolio moves gradually and opportunistically

### Recoveries from Past Bear Markets Featured Multiple Significant Pullbacks in Equity Markets<sup>1</sup>

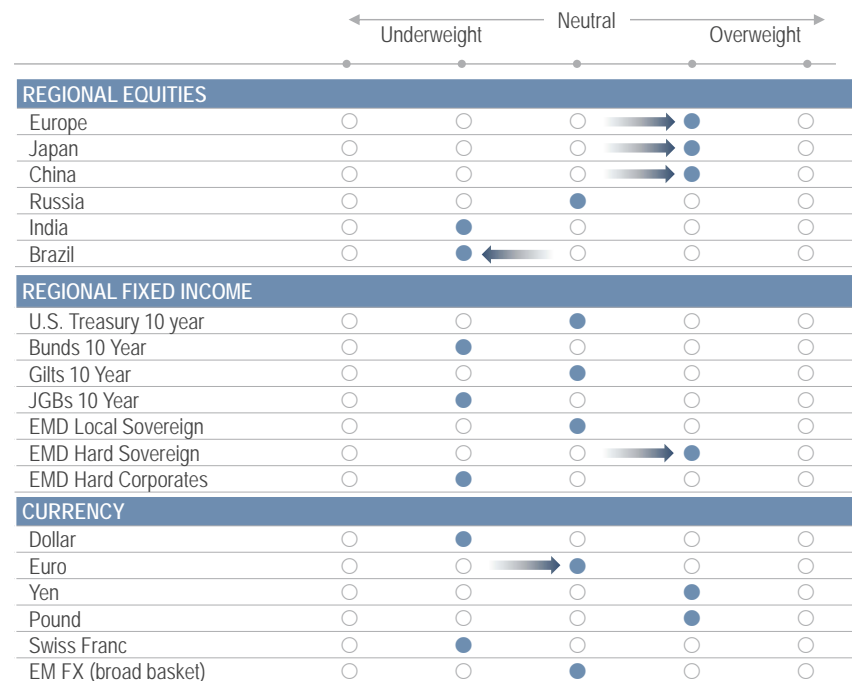

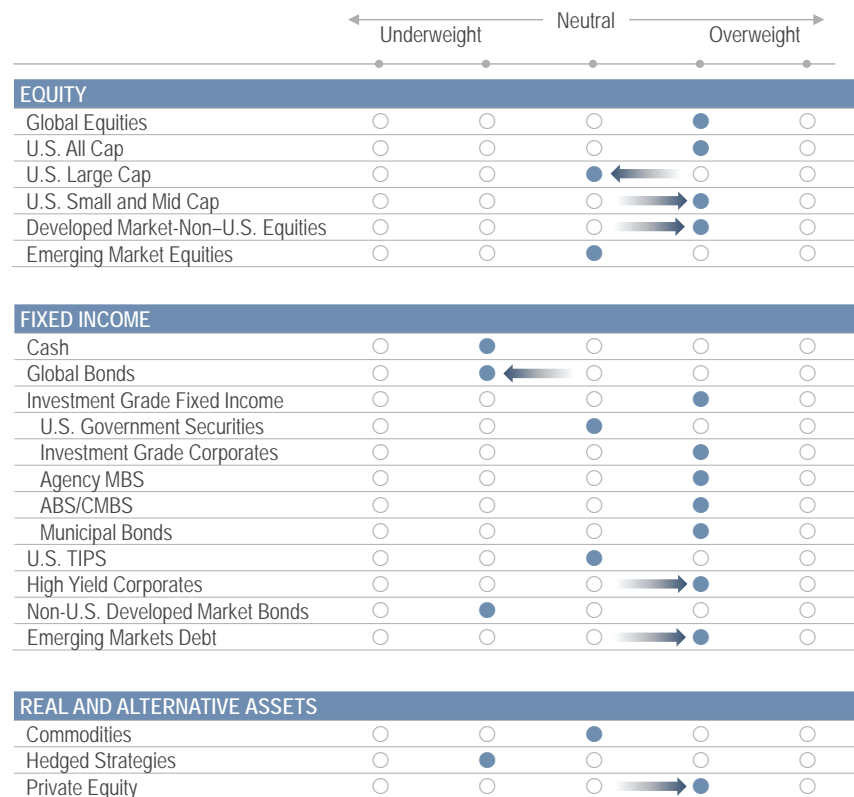

1. Calculated using the S&P 500 index.

Source: Bloomberg; as of 6/30/2020. Based on weekly price data. For each bear market recovery, maximum drawdowns calculated on a weekly basis (% decline from highest stock market level of the recovery to that date), and then the number of drawdowns worse than 5% is depicted on the chart. Past performance is not indicative of future results.
