Risk and Reward Profile

The Risk and Reward Indicator table demonstrates how the Fund ranks in terms of potential risk and reward.

The greater the potential reward, the higher the risk of an investor losing money. This indicator is based on past data which may change over time and may not be a reliable indication of the Fund's future risk profile. The shaded area below shows the Fund's Risk/Reward ranking.

The Fund is ranked five because funds of this type have experienced medium rises and falls in price in the past. Please note that even the lowest risk rated investments may suffer from severe losses in extreme market circumstances.

The indicator does not take into account the following risks of investing in this Fund:

- The Fund could lose money if an entity with which it interacts becomes unwilling or unable to meet its obligations to the Fund.
- Investing overseas can bring additional returns and spread risk to different markets; however changes in currency rates may cause the value of your investment to decrease.
- Certain holdings could become hard to value or sell at a desired time and price.
- The Fund could lose money if it has concentrated exposure to an issuer or security that suffers from an adverse event.
- Greater fluctuations in the value of the Fund may be experienced through the use of derivatives by one or more of the underlying investments.
