

Momentum Sustainable Managed Portfolio 5

27 February 2026

For professional advisors only

Investment objective & strategy

To achieve sustainable real returns from a mix of different asset classes, within a tight risk controlled framework. The Portfolio will invest predominantly in funds that are considered to have a better or improving sustainability footprint versus their broader peer group, or that when blended together will help the model portfolio achieve superior sustainability credentials. The Portfolio can invest in a range of asset classes such as equities, bonds, real assets, absolute return funds and cash. Sustainable Managed Portfolio 5 is designed to target a real return (above inflation) of 5% over the longer term and is aimed at investors who have a low-medium tolerance for risk.

Investment team

Peer group: Dynamic Planner Risk Profile 5. Performance is calculated on a total return basis in GBP terms. The value of the underlying funds and the income generated from them can go down as well as up, and is not guaranteed. Investors may not get back the original amount invested. The value of investments involving exposure to foreign currencies can be affected by currency exchange rate fluctuations.

[†] Performance figures prior to the inception date of the Portfolio have been simulated. See Important Information section for more details. Past performance is not a guide to future performance.

Monthly commentary

- February was shaped by a major escalation in US-Iran tensions. On the final day of the month, joint US and Israeli strikes on Te hran resulted in the death of Ayatollah Ali Khamenei and several senior officials. Markets responded immediately: oil prices spiked on fears of potential disruption in the Strait of Hormuz, prompting a rapid repricing of risk assets and a rise in inflation expectations.
- Precious metals were volatile but ended higher. Silver rose 12% after large intra-month swings. Equity performance was uneven. The US underperformed and was one of the few developed markets to decline. Returns continued to broaden globally: Japan gained more than 11%, supported by the Takaichi election outcome; UK equities and emerging markets rose more than 7% each; and Europe almost 5%. Value and low-volatility equities outperformed. Growth equities fell for a fourth consecutive month, with the 'Mag 7' index down 4.8%. Software-as-a-service companies saw sharp declines amid concerns over AI-related disruption.
- Listed real assets delivered strong returns, with global property and infrastructure both up over 9%. Their defensive characteristics and bond-market sensitivity supported gains as global bonds posted small positives. Alternatives, including gold, also helped multi-asset portfolios.
- Cryptocurrencies weakened further. Bitcoin declined over 13%, marking a fifth consecutive monthly fall and leaving it 46% below its October peak.
- Macro data remained soft. US Q4 GDP slowed but continued to outpace Europe and the UK, which grew 0.1% quarter-on-quarter. The US labour market continued to ease. Central banks in the UK and Europe kept rates unchanged, though the geopolitical shock and rising inflation expectations reduced the likelihood of near-term rate cuts.
- Overall, February produced positive returns across many mainstream assets but exposed vulnerabilities in asset-light industries facing liquidity pressures. Heightened geopolitical risk centred on the Strait of Hormuz remains a key driver of global growth and inflation dynamics. Our multi-asset portfolios remain diversified, tilted toward quality, and moderately underweight interest-rate exposure relative to strategic benchmarks.

Important information

Fact sheet asset allocation percentages are in some cases based on the normalised (or benchmark) asset allocations of investee funds, as opposed to the actual exposures of those funds at the date of the fact sheet. This reflects the expected average allocation over time which will result from decisions to hold particular funds.

It is not an invitation to subscribe and is by way of information only. Nothing contained herein constitutes investment, legal, tax or other advice nor is it to be solely relied on in making an investment or other decision. If you are considering investing in the Momentum Sustainable Managed Portfolios clients should consult a suitably qualified and approved Financial Adviser.

Simulated past performance: Figures prior to the inception date of the Portfolio have been simulated using actual past performance of underlying holdings which are the same as, or substantially the same as, or underlie, the Sustainable Managed Portfolio 5 at inception. The performance shown represents performance of the Sustainable Managed Portfolios that are periodically restructured and rebalanced based on the impact of material, economic and market factors that influence MGIM's decision-making on asset allocation. The Sustainable Managed Portfolios are applied to client accounts by the platform provider but it may take some time for the client accounts to mirror the performance of the Sustainable Managed Portfolios. It is for this reason that client accounts may not have achieved exactly the same returns as the Sustainable Managed Portfolios. The performance of the Sustainable Managed Portfolios is based on the actual performance of the underlying funds included in the portfolios. These performance figures have not been audited by an external body. The value of investments may go down as well as up and the value will depend on fluctuations in financial markets outside MGIM's control, as a result an investor may not get back the amount invested. Past performance is not indicative of future performance and reference to a security is not a recommendation to buy or sell that security. Portfolio ratings: Default is a financial information business.
