Momentum Passive Plus Dynamic Portfolio

30 October 2026

For professional advisors only

Investment objective & strategy

The Momentum Passive Plus Dynamic Portfolio aims to deliver growth in real terms aligned to the risk profile of the solution, with anticipated volatility in the range of 12-15%. The portfolio aims to operate within the 'highest medium' risk profile. The portfolio will invest across a range of asset classes using passive instruments.

Investment team

The value of the underlying funds and the income generated from them can go down as well as up, and is not guaranteed. Investors may not get back the original amount invested. The value of investments involving exposure to foreign currencies can be affected by currency exchange rate fluctuations.
Past performance is not a guide to future performance.

Monthly commentary

- October was characterised by a broad shift towards a more risk-averse market environment, as investor concerns moved away from sovereign debt and back towards the sustainability of the AI-driven technology rally. While corporate earnings were generally supportive, markets reacted poorly to continued increases in capital expenditure by major technology firms, raising questions about whether investment in AI infrastructure is running ahead of underlying demand.
- Technology stocks came under pressure during the month, with the Nasdaq falling more than 11% from its peak and entering correction territory as investors reassessed valuation and financing risks within the AI ecosystem. Although earnings remained strong overall, increasingly ambitious spending plans by hyperscale technology companies and concerns around supply chain constraints led to a more cautious outlook.
- Despite weakness in headline indices, market performance beneath the surface was more encouraging. The equal-weighted S&P 500 rose 3.9%, while the MSCI Minimum Volatility Index gained 5.0%, reflecting a rotation away from highly valued growth stocks towards more defensive and quality focused areas of the market. This broadening of market leadership was a notable feature of the month.
- For UK investors, inflation developments remained a key focus. UK CPI increased from 3.1% to 3.5% during October, adding to concerns that inflationary pressures may prove more persistent than expected. Rising energy prices contributed to these concerns, with Brent crude oil gaining 12.6% over the month to finish at US$117.6 per barrel, extending its three-month climb to over 31%.
- Fixed income markets provided a more positive backdrop. Government bond yields retraced some of September's sharp rise, with the US 10-year Treasury yield falling from 5.29% to 4.91%. Bonds also demonstrated improved diversification characteristics during periods of equity market weakness, offering a reminder of their potential defensive role within diversified portfolios.
- Overall, October highlighted a clear risk off shift in investor sentiment, with market leadership broadening beyond the AI theme and greater focus being placed on quality, resilience and valuation discipline.

Important information

Prior to 15.04.2024 the Momentum Passive Plus Dynamic Portfolio was known as pi Dynamic Portfolio.

Fact sheet geographic allocation percentages are in some cases based on the normalised (or benchmark) asset allocations of investee funds, as opposed to the actual exposures of those funds at the date of the fact sheet. This reflects the expected average allocation over time which will result from decisions to hold particular funds.

It is not an invitation to subscribe and is by way of information only. Nothing contained herein constitutes investment, legal, tax or other advice nor is it to be solely relied on in making an investment or other decision. If you are considering investing in the Momentum Passive Plus Portfolios ("Portolios") clients should consult a suitably qualified and approved Financial Adviser. The performance shown represents performance of the Portfolios that are periodically restructured and rebalanced based on the impact of material, economic and market factors that influence MGIM's decision-making on asset allocation. The Portfolios are applied to client accounts by the platform provider but it may take some time for the client accounts to mirror the performance of the Portfolios. It is for this reason that client accounts may not have achieved exactly the same returns as the Portfolios. The performance of the Portfolios is based on the actual performance of the underlying funds included in the portfolios. These performance figures have not been audited by an external body. The value of investments may go down as well as up and the value will depend on fluctuations in financial markets outside MGIM's control, as a result an investor may not get back the amount invested. Past performance is not indicative of future performance and reference to a security is not a recommendation to buy or sell that security.
